

— DEVIN TAKE-HOME · 2026

A Visual Review Gate for Superset

Devin renders every UI pull request and gates the merge on what it sees.

DAYUAN JIANG · BUILT ON DEVIN NATIVE AUTOMATIONS

— WHAT

All checks green. The stripes are gone.

BASE · STRIPED

Michael	A		2.47
Christopher	B		1.73
David	A		1.57
James	C		1.51
John	B		1.43
Matthew	A		1.36
Robert	C		1.31
Daniel	B		1.16

PR · STRIPES ERASED

Michael	A		2.47
Christopher	B		1.73
David	A		1.57
James	C		1.51
John	B		1.43
Matthew	A		1.36
Robert	C		1.31
Daniel	B		1.16

— WHAT

And Superset lives on rendered charts

FRONTEND PRS

12 / 27

of the last 27 merged PRs touch superset-frontend.

CHECKS THAT SEE THE RENDER

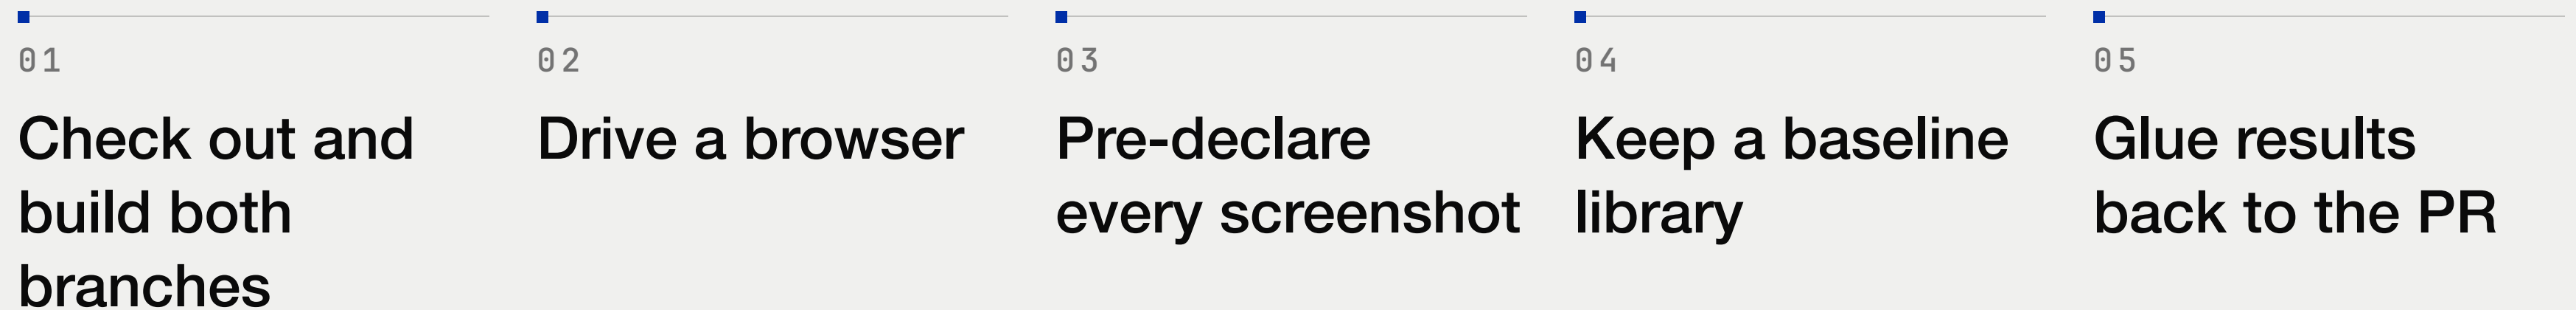

0 / ~40

About 40 CI checks plus an AI review bot, and every one of them reads code.

— WHY IT'S HARD

Why almost nobody builds this check

The pipeline you would have to build and maintain yourself:

And even with an LLM judging the screenshots, a script only does what its author **anticipated**.

— HOW

With Devin, you just chat

Tell Devin what you want, and it builds the automation with you.

Generate new automation

Help me generate a new automation.

Congrats on starting your first session!

Try tagging @Devin in [Slack](#) or [Teams](#) for small bug fixes

More tips for first-time users

Thought for 8s

Sure — what should the automation do? Tell me the trigger (e.g. Slack message, GitHub PR/issue event, schedule) and the action you want Devin to take.

Worked for 11 seconds

Only GitHub is connected (no Slack/Linear/Jira), and you already have two automations: "Autofix UI issues" (github:issues) and "Visual review gate" (github:pull_request). What should the new one do?

Devin is awaiting instructions

What trigger should the new automation use?

A

Recurring schedule (e.g. daily/weekly job on a repo)

B

GitHub PR event (e.g. review/fix on new PRs)

C

GitHub issue event

D

Incoming webhook

Ubuntu

— HOW

Or configure it directly: GUI, or API with JSON

GUI

The screenshot shows the 'Visual review gate' configuration page. At the top, there's a title bar 'Visual review gate'. Below it, a toggle switch is set to 'Active', and it says 'Created by homework on Aug 26, 2026'. The 'Triggers' section has a sub-header 'Run automation when any of these conditions are met' and an '+ Add trigger' button. There are two trigger conditions listed: 1. 'Pull request' in repo 'DayuanJiang/superset', with 'Action' set to 'Opened, Synchronize'. 2. 'Head branch' 'starts with' 'devin/ui-fix/'. Below the triggers is the 'Agent definition' section with the sub-header 'Define what happens when triggers are activated'. It includes an 'Agent type' dropdown set to 'Decide what the agent should do on new events' with a 'Start new session' button, and an 'Instructions' text area containing the text: 'Use visual-review-gate on DayuanJiang/superset. The triggering pull request is in the event payload below.'

API · POST /AUTOMATIONS

```
{
  "triggers": [{
    "event_type": "github:pull_request",
    "conditions": { "all": [
      { "field": "action", "operator": "in",
        "value": ["opened", "synchronize"] },
      { "field": "pull_request.head.ref",
        "operator": "starts_with",
        "value": "devin/ui-fix/" }
    ] }
  ] },
  "actions": [{
    "type": "start_session",
    "prompt": "Use @skills:visual-review-gate ..."
  } ],
  "limits": { "max_acu_limit": 25 }
}
```

— HOW

Here is what I created

The instructions live in a skill rather than the prompt, so you can also mention @Devin on any PR or issue for a visual check.

The check fails, and the maintainer sees why

Rendered both branches, compared them, posted the verdict back to the PR.

✖

All checks have failed

1 failing check

✖

visual-review — Dark theme zebra striping disappears (contrast 1.0607 -> 1.0000)

...

✔

No conflicts with base branch

Merging can be performed automatically.

Merge pull request

MERGE BLOCKED · RIGHT: DEVIN'S COMPARISON COMMENT

fix(plugin-chart-ag-grid-table): align zebra stripe contrast with classic table #5
devin-ai-integration[bot] wants to merge 1 commit into master from devin/ui-fix/1

Dark theme — base vs PR (striping visible on base, gone on the PR)

base (master)				this PR			
name	category	sum_num		name	category	sum_num	
Michael	A	2.47		Michael	A	2.47	
Christopher	B	1.73		Christopher	B	1.73	
David	A	1.57		David	A	1.57	
James	C	1.51		James	C	1.51	
John	B	1.43		John	B	1.43	
Matthew	A	1.36		Matthew	A	1.36	
Robert	C	1.31		Robert	C	1.31	
Daniel	B	1.16		Daniel	B	1.16	
Isacanh	A	1.11		Isacanh	A	1.11	

Light theme — base vs PR (improvement, matches the classic table)

base (master)				this PR			
name	category	sum_num		name	category	sum_num	
Michael	A	2.47		Michael	A	2.47	
Christopher	B	1.73		Christopher	B	1.73	
David	A	1.57		David	A	1.57	
James	C	1.51		James	C	1.51	
John	B	1.43		John	B	1.43	
Matthew	A	1.36		Matthew	A	1.36	
Robert	C	1.31		Robert	C	1.31	
Daniel	B	1.16		Daniel	B	1.16	
Isacanh	A	1.11		Isacanh	A	1.11

— HOW · OBSERVABILITY

And you can watch it all in the Devin app

Each automation has an overview: trigger events, success rate, and a link to every session.

THE AUTOMATION'S ACTIVITY VIEW

— WHY DEVIN

Devin is a **general AI expert** that runs in the cloud

USE CASE

DEVIN ON THE JOB

PR review & visual QA	finds and fixes bugs, visual QA with a full browser and desktop
Issue triage & bug fixing	investigates incidents, routes bug reports, fixes CI failures
Code migrations & refactors	a fleet of agents modernizes repos in parallel
Documentation	auto-generates docs and system diagrams for legacy codebases
Scheduled chores	daily QA, release notes, continuous user-feedback follow-up
Testing & more	unit and E2E tests, performance work, browser automation

USE CASES AS LISTED ON DEVIN.AI

— WHY DEVIN · CASE

Devin became Gumroad's #1 contributor

PRS MERGED · 4 MONTHS

1,583

about 10 merged per day.

MERGE RATE

85%+

of Devin's PRs got merged.

TOP CONTRIBUTOR

5/7

#1 contributor on 5 of the 7 most active repos.

Piloted with one engineering pod in December 2024; company-wide within weeks.

SOURCE: DEVIN.AI · CUSTOMERS · GUMROAD

— WHEN

The playbook for a real engagement

Start with one small automation to see how little setup it takes. Then:

01

Analyze

Recent issues and PRs: where is the bottleneck, what can be automated.

02

Prioritize and automate

The high-priority tasks that bring the team the most value, first.

03

Monitor and expand

Watch the results, then cover more tasks and more scenarios.

And the most interesting part: [this loop is itself work you can hand to Devin](#).
